## Summary

Product designer and former software engineer, designing AI-native, data-heavy B2B products for technical users. As first design hire at CodeXray, took the product from a pitch prototype to the live product the company sells with, owning research, flows, high-fidelity UI, and a design system built on tokens, Figma variables and modes, and a component library checked against WCAG 2.2 AA. Designs across web and mobile, runs user interviews and usability tests, mentors other designers, and designs with engineers, not for them.

## Work Experience

**Product Designer | CodeXray, Bangalore** Jul 2025 – Present

*First design hire at a bootstrapped company building a full-stack observability and AI root-cause investigation platform for SRE and DevOps teams; 4+ enterprise clients.*

- Took the product from a pitch prototype to a live enterprise platform as its only designer for the first eight months, owning information architecture, flows, UI, design system, brand identity, and the product specifications engineering builds from.
- Restructured application triage from a source-led architecture, where signals were split by how they were collected, to an application-first architecture organised around user intent — cutting an SLO-violation triage path from 17 steps to 10 and consolidating three separate views into one.
- Audited the existing monitoring experience against roughly 20 documented usability failures — including duplicate summaries computed over mismatched time windows and critical-state counts with no path to act on them — and structured the redesign across list, detail, and deep-triage layers.
- Built the design system engineering builds from — named tokens, Figma variables and modes for light/dark themes, and a WCAG 2.2 AA-checked component library spanning charts, heatmaps, flame graphs, and severity states.
- Designed the platform's AI experiences: the Agentic SRE investigation lifecycle, separating pipeline status from AI confidence so incomplete evidence is never misread as an unreliable conclusion, and the new conversational AI assistant.
- Led design for the API Security MVP — API discovery, shadow API detection, risk scoring, PII exposure, and OWASP vulnerability management — delivered to two enterprise clients.
- Lead design reviews and present design decisions to company leadership for every feature, synthesising feedback into the specifications engineering builds from.
- Designed the interface the company sells with: the live product replaced the sales deck outright and has since carried 20+ client pitches, customer demos, and industry showcases — including the 11th CIO Conclave & Awards 2025 (UBS Forums), where CodeXray won Best Product in Agentic SRE & Full Stack Observability Tools.

**UI/UX Design Intern | Neointeraction Design, Bangalore** Jan 2025 – Jul 2025

- Led UX discovery and wireframing for PVT Merit Labs, converting manual laboratory processes into a structured digital system with role-based access, and designed the end-to-end workflows for administrators and assistants.
- Redesigned the NirmaanXD and Geojit platforms, restructuring information architecture to simplify dense workflows.
- Designed onboarding, plugin discovery, and issue-reporting experiences for a software marketplace platform.

**Software Developer | Intel, Bangalore** Jul 2021 – Nov 2024

- Shipped features for FlexRAN, Intel's virtualized 5G radio access network platform, working on performance, scalability, and low-latency paths in production infrastructure.
- Supported BEVOLAKE private wireless deployments across Day 0/1/2 operations, gaining firsthand experience of the deploy, monitor, and troubleshoot loop SRE and operations teams work in.
- Diagnosed production failures and shipped performance fixes across distributed systems, building the root-cause instinct behind my investigation design.

## Skills

| | |
|---|---|
| **Design** | Interaction & Visual Design, Information Architecture, User Flows, Wireframing, Prototyping, Web & Mobile UI, Motion & Micro-interactions, Design Systems & Tokens, Data Visualization, Accessibility (WCAG 2.2 AA) |
| **Research** | User Interviews, Contextual Inquiry, Usability Testing, Stakeholder Workshops, Personas, Empathy Maps, Journey Maps, Service Blueprints |
| **Process** | Design Reviews, Mentoring, Agile/Scrum, Product Specifications, API-Aware Design, Design Tokens to Code |
| **Domain** | Observability & APM, Incident Investigation, API Security, Agentic & Conversational AI, B2B SaaS |
| **Tools** | Figma (auto layout, variables, modes, component properties), FigJam, Framer; Claude, Codex, Lovable |

## Education

**M.Tech in CSE** IIT Guwahati | CGPA: 8.4/10 2019 – 2021

**B.Tech in CSE** Panjab University | CGPA: 7.5/10 2014 – 2018

## Publications

**Corruption Exposes You: Statistical Key Recovery from Compound Logic Locking** — ISQED 2022

**Arshdeep Kaur**, Sayandeep Saha, Chandan Karfa, Debdeep Mukhopadhyay — Paper · Talk
