Arshdeep Kaur

Product Designer · Developer Tools, Observability & AI Products

LinkedIn | Portfolio | arshdeep24kaur@gmail.com | +91 9779720024 | Bangalore, India (open to on-site or fully remote)

Summary

Product designer and former software engineer, building for SRE and DevOps teams across observability, API security, and agentic AI. Spent 3.5 years shipping virtualized 5G network software at Intel before moving into design, and now works directly on distributed systems, telemetry, and AI investigation problems — designing with engineers rather than for them. Took CodeXray from a pitch prototype to the live product the company sells with.

Work Experience

Product Designer | CodeXray, Bangalore Jul 2025 – Present

First design hire at a bootstrapped company building a full-stack observability and AI root-cause investigation platform for SRE and DevOps teams; 4+ enterprise clients.

- Took the product from a pitch prototype to a live enterprise platform as its only designer for the first eight months, owning information architecture, flows, UI, design system, brand identity, and the product specifications engineering builds from.
- Restructured application triage from a source-led architecture, where signals were split by how they were collected, to an application-first architecture organised around user intent — cutting an SLO-violation triage path from 17 steps to 10 and consolidating three separate views into one.
- Audited the existing monitoring experience against roughly 20 documented usability failures — including duplicate summaries computed over mismatched time windows and critical-state counts with no path to act on them — and structured the redesign across list, detail, and deep-triage layers.
- Built and documented the design system engineering builds from directly — base components composed into higher-order patterns, with full light and dark theming across charts, heatmaps, flame graphs, and severity states.
- Led design for the API Security MVP — API discovery, shadow API detection, risk scoring, PII exposure, and OWASP vulnerability management — delivered to two enterprise clients.
- Specified and designed the Agentic SRE investigation experience, defining the investigation lifecycle and separating pipeline status from AI confidence so an investigation running on incomplete evidence is never misread as an unreliable conclusion.
- Designed the interface the company sells with: the live product replaced the sales deck outright and has since carried 20+ client pitches, customer demos, and industry showcases — including the 11th CIO Conclave & Awards 2025 (UBS Forums), where CodeXray won Best Product in Agentic SRE & Full Stack Observability Tools.

UI/UX Design Intern | Neointeraction Design, Bangalore Jan 2025 – Jul 2025

- Led UX discovery and wireframing for PVT Merit Labs, converting manual laboratory processes into a structured digital system with role-based access, and designed the end-to-end workflows for administrators and assistants.
- Redesigned the NirmaanXD and Geojit platforms, restructuring information architecture to simplify dense business workflows.
- Designed onboarding, plugin discovery, and issue-reporting experiences for a software marketplace platform.

Software Developer | Intel, Bangalore Jul 2021 – Nov 2024

- Shipped features for FlexRAN, Intel's virtualized 5G radio access network platform, working on performance, scalability, and low-latency paths in the class of production infrastructure the products I now design monitor.
- Supported BEVOLAKE private wireless deployments across Day 0/1/2 operations — the deploy, monitor, and troubleshoot loop that defines the SRE workflows I design for today.
- Diagnosed production failures and shipped performance fixes across distributed systems, building the operational instinct I now apply to triage and investigation design.

Skills

Design	Product Design, Enterprise SaaS, Information Architecture, Design Systems, Data Visualization, Dashboard & Workflow Design, Interaction Design, Prototyping
Research & Strategy	Heuristic Evaluation, Task & Flow Analysis, Competitive Analysis, Systems Thinking, Product Specification, Designing for Complex Technical Systems
Domain	Observability, APM & Distributed Tracing, Infrastructure & Database Monitoring, API Security, Agentic AI / LLM Product Design
Tools	Figma, FigJam, Framer, Notion; AI-assisted prototyping and spec workflows (Claude, Codex, Lovable)

Education

M.Tech in CSE IIT Guwahati | CGPA: 8.4/10 2019 – 2021

B.Tech in CSE Panjab University | CGPA: 7.5/10 2014 – 2018

Publications

Corruption Exposes You: Statistical Key Recovery from Compound Logic Locking — ISQED 2022
